

CLAIMS:

1. A flame retardant silicone composition comprising  
(A) 100 parts by weight of an organopolysiloxane  
5 having at least one lower alkenyl group in a molecule,  
represented by the following general formula (1):

- 10 wherein R is a lower alkenyl group,  $R^i$  is a substituted or  
unsubstituted monovalent hydrocarbon group free of aliphatic  
unsaturation, "a" is a positive number of 0.0001 to 0.2, "b"  
is a positive number of 1.7 to 2.2, and the sum of a+b is 1.9  
to 2.4,

- 15 (B) an organohydrogenpolysiloxane having at least two  
hydrogen atoms bonded to silicon atoms in a molecule, in an  
amount to give 0.1 to 5 silicon atom-bonded hydrogen atoms  
per alkenyl group in component (A),

- (C) a platinum catalyst in an amount to give 0.1 to  
20 1,000 ppm of platinum element based on the weight of  
component (A), and

- (D) 0.0001 to 1 part by weight of at least one  
compound selected from the group consisting of indoline,  
1,2,3-triazole, 1,2,4-triazole, imidazole, indazole,  
25 benzoxazole, 2-hydroxybenzoxazole, 5-benzyloxyindole,  
1,2-benzisoxazole, 2,1-benzisoxazole, and 1,3-benzodioxole.

2. The composition of claim 1 wherein components (A) and  
(B) contain low-molecular-weight cyclic siloxane fractions D,  
30 to D<sub>10</sub> in a total amount of up to 1,000 ppm.
